

THE COMPLETE LINING SYSTEM FOR

# Superior Homes

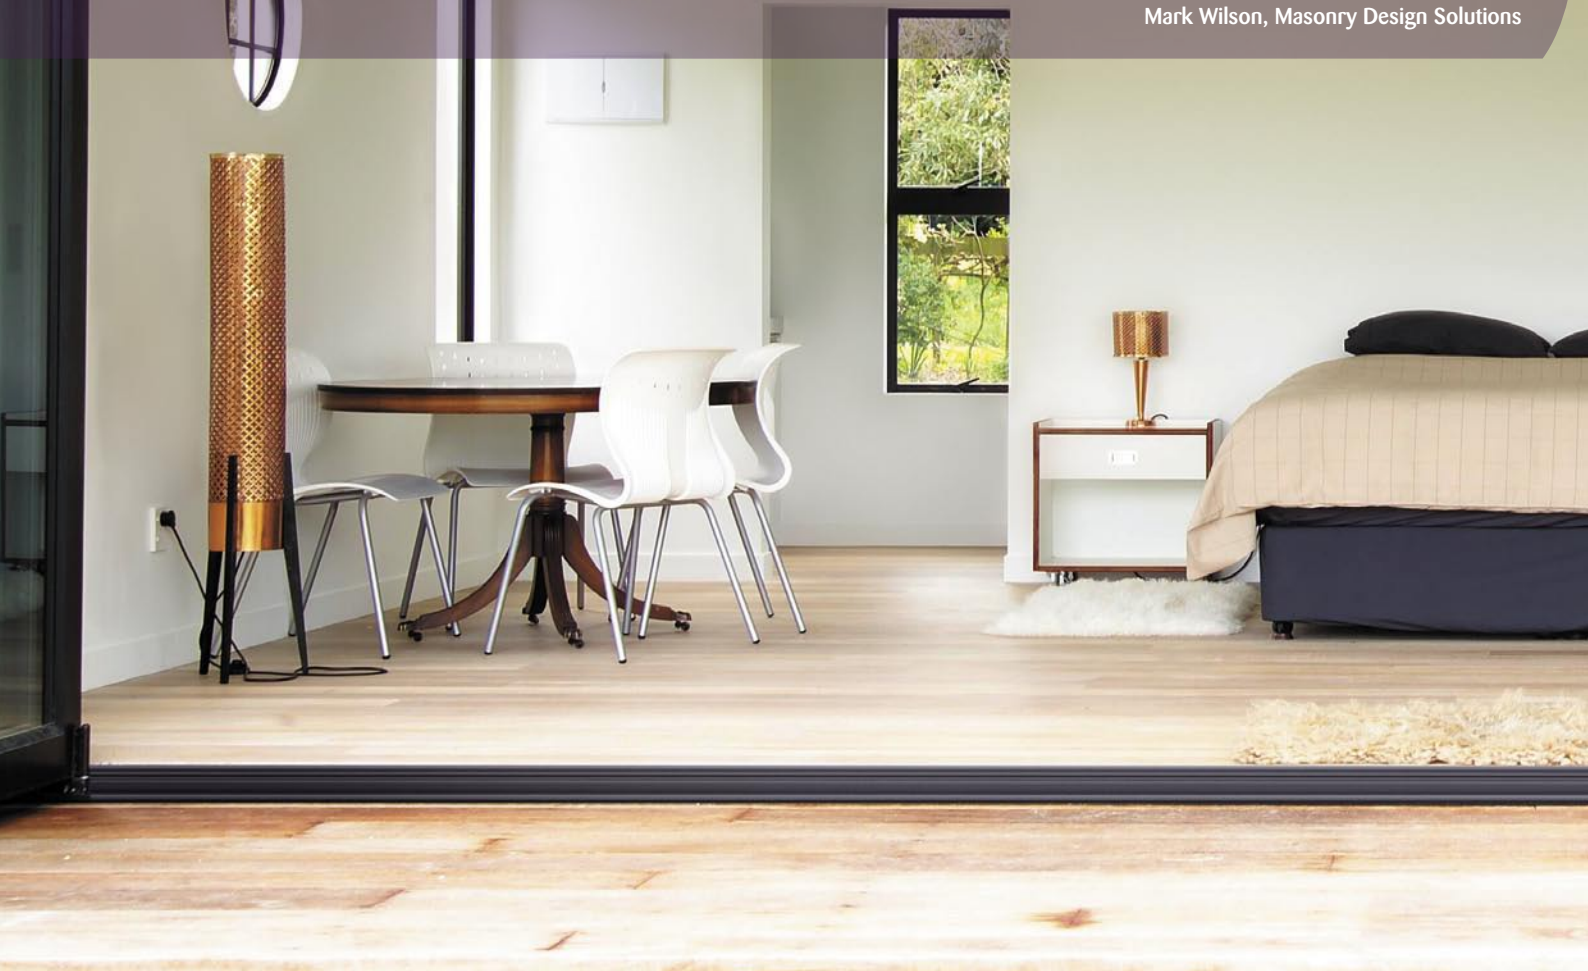

GIB Ultraline<sup>®</sup> PLUS Lining System

The new standard in lining systems  
for New Zealand's top homes

  
**GIB**  
Living Solutions<sup>®</sup>

“Specifying a quality product is the best way we can ensure the foundation of a top level finish.”

Mark Wilson, Masonry Design Solutions

## A complete lining system for New Zealand's top homes

As a nation we're becoming more and more discerning. Style, design and craftsmanship are replacing the old number-8 wire mentality.

To meet this challenge, the all new GIB Ultraline® PLUS Lining System has been specifically designed and tested to enhance New Zealand's top homes.

The system is a complete lining system specification of best practice GIB® materials, systems and installation practices. It delivers a high quality interior finish, while at the same time it can provide extra performance such as noise control, bracing and even fire rated protection for your home.

All this can be achieved while using only the one plasterboard product, 13mm GIB Ultraline® PLUS, on walls and ceilings.

Note: 13mm GIB Aqualine® is specified for wet areas.

## The secret to a high quality finish

Creating a high quality interior for your home starts with the walls and ceilings. To help make this possible, the unique Pearlcoat™ coated paper

is used on all 13mm GIB Ultraline® PLUS plasterboard. This remarkable paper helps achieve a uniform paint finish and helps minimise joint visibility to deliver the perfect backdrop to a beautiful home.

13mm GIB Ultraline® PLUS is available in a range of sheet sizes that aids horizontal fixing and minimises the number of joints.

## Quality right from the core

As well as being thicker than standard 10mm GIB® plasterboard the density of 13mm GIB Ultraline® PLUS has been increased and special fibreglass reinforcing added. This delivers a much more rigid and flatter surface. Plus, a more durable, solid and secure feel throughout the home.

## A small investment for a higher quality finish

The GIB Ultraline® PLUS Lining System aims to deliver a higher quality finish than lining your home with standard 10mm GIB® plasterboard. This can be achieved for an additional investment that represents just a fraction of the total outlay in a top home. In fact it may actually save time and money if you feel your only current option for a quality finish is an expensive skim coat process.

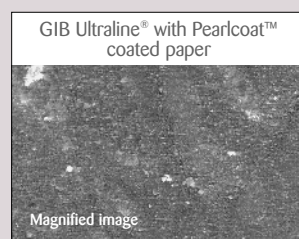

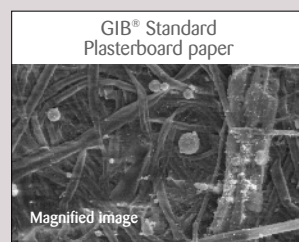

## The smoothest finish yet

The coating process of the super smooth Pearlcoat™ coated paper fills in the microscopic gaps which would otherwise give the paper a rougher feel.

This greatly reduces “fibre lift” from the sanding process and helps make the joints far less visible because the texture of the paper more closely matches that of the specified compound.

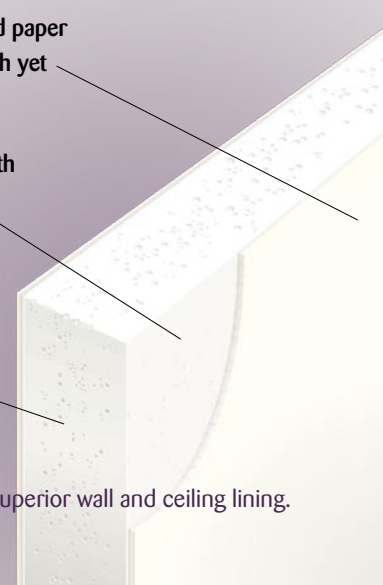

Pearlcoat™ also allows for a longer “wet edge” time during painting, which helps achieve a more uniform paint finish.

**New Pearlcoat™ coated paper for the smoothest finish yet**

**Dense plaster core reinforced with fibreglass for added strength**

**13mm thick for improved durability and a more solid feel**

13mm GIB Ultraliner® PLUS – A superior wall and ceiling lining.

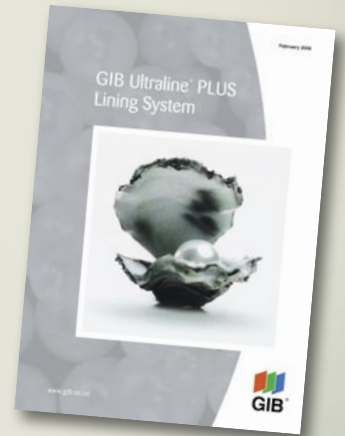

## Ask your architect or builder to specify the GIB Ultraline® PLUS Lining System

The easy way to help achieve the high quality finish and performance you desire is to ensure your builder or architect specifies in your plans the use of the GIB Ultraline® PLUS Lining System in your home.

The full system book containing materials, systems and installation practices is available by visiting [www.gib.co.nz](http://www.gib.co.nz), or calling 0800 100 442.

## What the experts say

### Designer

“When it comes to interior lining, one of the major requirements clients have is finish quality. That is what we strive for. Specifying one product throughout the house reduces complications and makes it much easier to follow the job through without worrying about products being substituted along the way.” **Mark Wilson, Masonry Design Solutions**

### Stopper

“We like seeing a top quality product like GIB Ultraline® on site. This new paper seems to have a much better quality and the compound trowels on really nicely. We seem to have more time to feather out the edges to create a nice smooth finish.” **Dave, Active Drywall**

### Home Owner

“Using new 13mm GIB Ultraline® PLUS the builders have managed to achieve a fantastic result, which delivers exactly the look and finish that I had envisioned. I am extremely pleased with the result. The house looks fantastic and we have had a lot of positive comments about the quality of finish we have managed to achieve.” **Ray Poole, Clevedon**
